

MULTIPLICATION MULTI-DIGIT

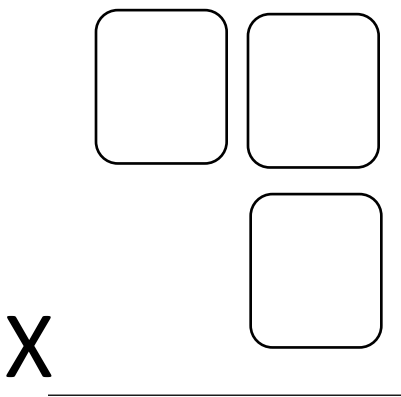

CARD GAME

Materials: paper and pencil, deck of cards (remove Tens and face cards; Aces = 1, Jokers = 0)

This game is for two to four players. The object of the game is to score the most points by making and solving math problems with large animals.

Instructions:

1. For each player create a table like the one below

2. Each player, in turn, draws the number of cards required to fill the number of spaces on the game board. As each card is drawn it must be placed on the game board. Cards may not be moved once they are placed. Cards are placed on each board to form the largest possible answer.
3. After the cards are placed on a game board, players must calculate the answer to their problem. If the answer is correct, a player may record the answer as his/her score. If they are incorrect, he must record a score of zero for that round. Players are encouraged to calculate each answer in their heads without paper/pencil within two-minute time limit.
4. Record the answer for each player for each round.
5. The game ends when there are no cards remaining in the pack or at the end of four rounds, whichever come first. The player with the largest is the winner.
